

ABSTRACT OF THE DISCLOSURE

5 A clothes drying apparatus for allowing articles that need to
be dried flat to air dry. The clothes drying apparatus includes a
support assembly being designed for being selectively positioned on
a support surface. A plurality of support frame assemblies are
pivotaly coupled to the support assembly whereby each of the
10 support frame assemblies selectively radiates from the support
assembly. Each of the support frame assemblies is designed for
receiving and supporting at least one article of clothing to allow
the clothing to air dry.
